Hypertension® (ISSN 0194-911X), a peer reviewed journal, is a program of the American Heart Association and is published monthly by Lippincott Williams & Wilkins, 16522 Hunters Green Parkway, Hagerstown, MD, 21740-2116. Business offices are located at 530 Walnut Street, Philadelphia, PA, 19106-3621. Periodical postage paid at Hagerstown, MD, and at additional mailing offices. **Postmaster:** Send address changes to *Hypertension*, P.O. Box 1550, Hagerstown, MD 21740.

Annual subscription rates: *United States* - \$299 Individual, \$481 Institution, \$150 In-training. *Rest of World* - \$399 Individual, \$559 Institution, \$199 In-training. Single copy rate \$48. Subscriptions outside the United States must be prepaid. GST tax of 7% will be added to the subscription price of all orders shipped to Canada. (Lippincott Williams & Wilkins' GST Identification #895524239. Publications Mail Agreement #40052291).

Please indicate in-training status and name of institution. Institutional rates apply to libraries, hospitals, corporations, and partnerships of three or more individuals. Prices subject to change without notice. Subscriptions will begin with currently available issue unless otherwise requested. Copies will be replaced without charge if the publisher receives a request within 90 days of the mailing date.

Individual and in-training subscription rates include print and access to the online version. Institutional rates are for print only; online subscriptions are available via Ovid. Please contact the Ovid Regional Sales Office near you for more information on institutional online access. Visit www.lww.com/resources/librarians/ for contact information.

Response to a New Hormone Therapy With Drospirenone and NO Production in Postmenopausal Women

William B. White

★e107

On the cover: Placement of connexins in the vessel and possible roles in mediating cell–cell interactions. Three modes of intercellular signaling are shown: (1) water-filled channel, (2) hemichannel, and (3) direct molecular signaling. This figure shows transcellular connexin–connexin signaling mediated by molecular interaction 3. This highlights the suggestion that other molecules, such as signaling kinases and ion channels, may be part of the gap junctional signaling complex. (See page 805.)
