Hypertension® (ISSN 0194-911X), a peer reviewed journal, is a program of the American Heart Association and is published monthly by Lippincott Williams & Wilkins, 16522 Hunters Green Parkway, Hagerstown, MD, 21740-2116. Business offices are located at 530 Walnut Street, Philadelphia, PA, 19106-3621. Periodical postage paid at Hagerstown, MD, and at additional mailing offices. Postmaster: Send address changes to Hypertension, P.O. Box 1550, Hagerstown, MD 21740. Annual subscription rates: United States - $365 Individual, $645 Institution, $179 In-training. Rest of World - $495 Individual, $785 Institution, $235 In-training. Single copy rate $67. Subscriptions outside the United States must be prepaid. GST tax of 7% will be added to the subscription price of all orders shipped to Canada. (Lippincott Williams & Wilkins' GST Identification #895524239. Publications Mail Agreement #40052291). Please indicate in-training status and name of institution. Institutional rates apply to libraries, hospitals, corporations, and partnerships of three or more individuals. Prices subject to change without notice. Subscriptions will begin with currently available issue unless otherwise requested. Copies will be replaced without charge if the publisher receives a request within 90 days of the mailing date. Individual and in-training subscription rates include print and access to the online version. Institutional rates are for print only; online subscriptions are available via Ovid. Please contact the Ovid Regional Sales Office near you for more information on institutional online access. Visit www.lww.com/resources/librarians/ for contact information.

Correction★ e43

On the cover: Characterization of cardiomyocyte vacuolar morphology by assessment of apoptosis (TUNEL stain, 2 left panels) and autophagy (HcRed-LC3, 2 right panels) in Ad-AT1A–infected neonatal cardiomyocytes. Left panels, No evidence of apoptosis by TUNEL staining in Ang II–stimulated Ad-AT1A–infected cells displaying vacuolar morphology. Positive control cells (H2O2-treated myocytes, 200 μmol/L, 5 hours) displayed clear evidence of apoptosis by TUNEL staining. Right panels, Diffuse cytosolic and nuclear localization of HcRed-LC3 in Ang II–stimulated Ad-AT1A–infected cardiomyocytes displaying vacuolar morphology. (See page 1032.)
