In the article by Zoccali et al, “Paricalcitol and Endothelial Function in Chronic Kidney Disease Trial,” which published online on August 4, 2014, and appeared in the November 2014 issue of the journal (Hypertension. 2014;64:1005–1011. DOI: 10.1161/HYPERTENSIONAHA.114.03748), corrections are needed.

On p 1007, Results, left column, the sentence “No patient had vitamin D deficiency (25-OH VD levels <10 ng/mL), but 26 patients in the group randomized to paricalcitol and 19 in the group randomized to placebo (P=0.20) had vitamin D insufficiency (25-OH VD levels >10 ng/mL and ≤30 ng/mL, respectively),” has been changed to read, “Vitamin D insufficiency (>25 nmol/L <75 nmol/L) or deficiency (<25 nmol/L) was present in the vast majority (95%) of patients with no between-arms difference (42 patients in each group).”

On p 1008, Table 2, the value for Calcium in the Paricalcitol column that read “0.069 (0.031–0.011)” has been corrected to read “0.069 (0.031–0.11).”

The authors apologize for this error.

This correction has been made to the current online version of the article, which is available at http://hyper.ahajournals.org/content/64/5/1005.
