Correction to: Intracerebroventricular Infusion of the (Pro)renin Receptor Antagonist PRO20 Attenuates Deoxycorticosterone Acetate-Salt–Induced Hypertension

In the article by Li et al, “Intracerebroventricular Infusion of the (Pro)renin Receptor Antagonist PRO20 Attenuates Deoxycorticosterone Acetate-Salt–Induced Hypertension,” which published online on November 24, 2014, and appeared in the February 2015 issue of the journal (Hypertension. 2015;65:352–361. DOI: 1161/HYPERTENSIONAHA.114.04458), a correction is needed.

In the online-only Data Supplement, in the section Calcium Mobilization Assay, the sentence that read “Before each experiment, human angiotensinogen (R8276; Sigma-Aldrich) was added to each well to a final concentration of 1 μM” is corrected to read, “Before each experiment, angiotensinogen 1–14 (R8129; Sigma-Aldrich) was added to each well to a final concentration of 1 μM.”

The authors apologize for this error.

This correction has been made to the current online version of the article, which is available at http://hyper.ahajournals.org/content/65/2/352.
